For: ***AUTOMATIC DECODING METHOD FOR MAPPING AND SELECTING A
NON-VOLATILE MEMORY DEVICE HAVING A LPC SERIAL
COMMUNICATION INTERFACE IN THE AVAILABLE ADDRESSING
AREA ON MOTHERBOARDS.***

1. This action is responsive to amendment filed November 30, 2006. Claims 1, 7 and 14-16 have been cancelled. Claims 2-6, 8-13 and 17-20 are now allowed.

REASONS FOR ALLOWANCE

2. The following is an Examiner's Statement of Reasons for Allowance:

The prior arts of record do not teach or suggest, alone or in combination, **all** the limitations of the independent claims of the current invention (claims 3, 8, 11, 17 and 18). Claims 3, 11 and 17 references a "method for mapping and selecting a non-volatile memory device having a LPC serial interface"; claims 8

Art Unit: 2186

and 18 references "a non-volatile memory device equipped with an interface with LPC serial protocol and a plurality of address pins". The discussion of the reasons for allowance shall be directed to claim 3 in which the Examiner shall designate as the primary invention in this application; however, the reasons for allowance will also apply to all other indicated independent claims (claims 8, 11, 17 and 18). The prior arts of record do not teach nor suggest a system and method for mapping and selecting a non-volatile memory device having a LPC serial communication interface, wherein the memory is equipped with a plurality of addressing pins and mounted on a motherboard together with other memories of the same type bi-directionally connected with a controller putting it into communication with a processor housed in turn on the motherboard comprises a processor that compares the addressing pins of each memory with a portion of the addressing coding bits both to identify the addressing type to be used, top-down or bottom-up, and to determine which memory is polled by the controller for a given operation, wherein the addressing coding is a thirty-two-bit coding and the most significant bits A<31 :25> are used to identify the addressing type, while some intermediate bits A<24:21> are used for being compared with the addressing pins to determine which memory is polled by the controller. In light of the foregoing, claims 3, 8

Art Unit: 2186

11 and 17-18 of the present application are found to be patentable over the prior arts.

Claims 2, 4-6, 9-10, 12-13 and 19-20 further limit the allowable independent claims 3, 8, 11 and 17-18. These claims are therefore allowable for the same reason as set forth above.

Any comments considered necessary by Applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
